

KLIM SARAKEEV

R&D / Backend Engineer — Automation, Data Systems & LLM Integration

truuuuer@gmail.com · Dilijan, Armenia (GMT+4) · github.com/TruerDev · truer-web.netlify.app · t.me/truer_xD

PROFILE

Backend-focused R&D engineer who turns manual operations into production systems — the ad-account platform built at MST replaced an eight-person manual workflow with a single operator. Moved from running 100+ Google Ads accounts across 20+ countries to building the platforms that automate that work: an autonomous Google Ads buying agent, a browser-automation platform for account management, and a fraud-detection system with an ML ban predictor. Owns problems end-to-end, from schema design and APIs to background jobs, security hardening, CI/CD and tests. TypeScript/Node.js day to day, Python for data-heavy work. Strong algorithmic foundation from competitive programming.

TECHNICAL SKILLS

Programming: TypeScript / JavaScript (Node.js), Python, SQL

Backend & Data: PostgreSQL, Redis, BullMQ, Fastify, REST APIs, WebSockets, Zod, Drizzle ORM, structured logging (Pino)

Frontend: React, Next.js, TailwindCSS, Recharts, Three.js

Automation & Browser: Puppeteer, Chrome Extensions (Manifest V3), AdsPower / Dolphin / Octo Browser integration

AI / LLM: Claude & OpenAI APIs, MCP (Model Context Protocol), multi-agent orchestration, eval pipelines & LLM-as-judge, prompt-driven automation

DevOps & Tooling: Git, GitHub Actions (CI/CD), Railway, Vercel, unit & integration testing

EXPERIENCE

R&D Engineer · MST · Remote

Nov 2025 – present

- **Ads Combine Pro (ACP):** Built an autonomous Google Ads buying agent — a 7-agent LLM orchestration layer (OpenAI, Anthropic) that plans and runs campaign workflows end-to-end in a live browser session.
- **GAM-Pro:** Built an internal browser-automation platform for ad-account management. Closed 15 critical security vulnerabilities, extracted a repository layer and shipped bidirectional sync with AdsPower, Dolphin and Octo Browser; covered by 93+ unit and integration tests.
- **CTS Anti-Fraud Analytics:** Delivered a Google Ads fraud-detection system in 6 sprints: Chrome extension (MV3), Fastify backend and React dashboard, a logistic-regression ban predictor and a multi-model AI comparison (Claude, GPT, Gemini), shipped with CI/CD and 198 tests.
- Mentoring a junior engineer: full project handoffs with written documentation and structured task breakdowns.

Digital Marketing Operations · MST · Remote

Mar 2025 – Nov 2025

- Managed high-volume operations across 100+ Google Ads accounts in 20+ countries.
- Identified the automation gaps in account operations that became GAM-Pro, then moved into the R&D Engineer role to build and ship it.

PROJECTS

TrailPlanner — *Next.js, Mapbox, Three.js, BRouter, Open-Meteo*

- Solo-built SaaS hiking-route planner with 3D terrain rendering, alternative-route generation, and hiking-time estimation (Tobler's function); deployed on Vercel with a freemium pricing model in progress.

FinTrack — *Next.js, TypeScript, Supabase Postgres, Drizzle ORM, Zod, Recharts*

- Multi-currency personal finance tracker built around data integrity: schema validation, row-level security, analytics dashboards; deployed as a PWA.

RepoRoast — *Next.js, Gemini API, GitHub API*

- AI code-review tool: analyzes a public GitHub repository (structure, commits, dependencies, code) and returns a scored, severity-rated review in 11 languages; live at truer-repo-roast.vercel.app.

EDUCATION

Computer Information Systems — Vyatka State University College, Kirov · 2021–2024

Competitive programming — captain of the ICPC-style team “Vyatskie Sovy,” placing against students from leading Russian universities.
